

Johann Jacob Scheuchzer, *Copper Bible* (1731)

Abstract

In his *Copper Bible*, the Swiss physician and natural scientist Johann Jakob Scheuchzer (1672-1733) explained natural phenomena with the help of biblical narratives. Copperplate engravings no. 45-49 feature mountains and rock faces from the Swiss Alps, as well as plant and animal fossils. Scheuchzer interpreted the fossil skeleton in plate no. 49 (XLIX) as the remains of a man who had drowned in the biblical flood. Later, the French naturalist Georges Cuvier classified the fossil as an extinct giant salamander (*Andrias scheuchzeri*). Scheuchzer regarded his discoveries as empirical evidence of the biblical flood. As he understood it, mountains were submerged in the wake of the flood. When the water retreated, dead prehistoric animals, humans, and plants were left behind and eventually became fossilized in the mountains.
